

## Assignment 2 (5 points)

Write a C program that reads text from `stdin` and prints the non-blank lines, i.e., lines that contain at least one character than is not a space character. Note that the definition of a space character can be found in the manual entry for `isspace`.

Create a subdirectory of your home directory named `jan22` (note the case). Save your solution in that directory in a file named `p02.c`. Your program is due Friday January 22 at 3:00PM. You will not receive any credit if your program is late, has the wrong filename, or is in the wrong directory. You will receive credit only if all of the following are satisfied:

- Your work is in your `jan22` subdirectory.
- Your program is in a file named `p02.c`.
- You avoid the use of magic numbers.
- Your program produces the correct output.
