

Assignment h1 –Implementing head and cp.

This assignment will be due at 11:59 PM EST on January 24.

In this assignment, you will be implementing the Unix commands `head` and `cp`. You will implement `head` using standard C library functions, while `cp` will be implemented using system calls.

Sample code, including an implementation of the `cat` command done using both methods is available in the `commands` folder under in-class code. I suggest using those programs to help you do this assignment.

Both these programs will be 5 points each. If your program does not compile, you will not receive any points for that program.

Check out `h1` using `handin` on the CS server and submit when done.
