

Assignment h2 – Getting File Information.

This assignment will be due at 11:59 PM EST on February 2.

In this assignment, you will be implementing a program that gets some basic information about a file and displays it on the screen.

You will need to read the following

man 2 stat

man 7 inode

These can be accessed in the Linux Terminal. Readings on both will be posted on the class website as well under Readings.

The instructions on how to do this problem will be in the comments of the source code.

A working program will be in the test directory, so you can check your output against the output of the test program.

This program will be worth 5 points. No points will be awarded if this program does not compile.

Check out h2 using `handin` on the CS server and submit when done.
